软件使用说明文档-Mail Client 许子涵-2019141460424

一、实现功能

程序将实现一个 SMTP 客户端,使用 163 邮箱作为发件人,使用 SMTP 协议向指定的邮箱发送一封邮件。

二、操作步骤

1.获取发送方和接收方邮件地址和发送方的授权码,此处授权码以 163 邮箱为例

2.在程序中设置发送方和接收方的邮件地址;

```
# 选择发送方 (from) 和接收方 (to) 地址
fromAddress = "a15152sk@163.com"
toAddress = "1119450385@qq.com"
```

3.在程序中设置所需要发送的邮件具体内容;

```
# 编辑邮件信息. 发送数据
subject: str = "This is a test text for the computer network project"
contentType = "text/plain"

# 邮件内容: msg + endMsg
txt = "\r\n When you see these words, it means that the program is running successfully! Congratulations"
end = "\r\n.\r\n"
```

- 4.运行程序,发送邮件
- 5.邮件发送成功
